

The survey took place on the 16.9.2020
Arriving to the LPP – 21:15
End of measurements – 02:00

Moon conditions:
Dark moon – Light 0.4%

Sea conditions:
Waves height:
At the start – 50 cm.
At the end – 20 cm.

Wind intensity:
At the start – 10 knot
At the end – 2 knot

Measuring altitude from sea level:

[מידע סודי]

[מידע סודי] measurements (for each point) taken due to boat movements,
in order to prevent mistakes of heights differences.

All the measurements were done by the luxmeter towards the LPP ,
with any disturbances of the boat's deck lighting.
The battery was changed during the survey - time specified on the attached table.
On the Lighting Intensity Measurement Plan, distances were set at certain coordinates.
In practice, measurements were performed at different distances - specified in the table.

Conclusion
It can be concluded that:
The highest data is in:
