

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

5. ביצועי אנוש

5.1 HUMAN FACTORS BASIC CONCEPTS

5.1.1 Human Factors in aviation

- State that Human Factors training is an ICAO and CAA requirement.
- Justify the relevance of Human Factors in aviation.

5.1.1.1 Competence and limitations

- Define the roles played by various participants in aviation activities with respect to flight safety and the limitations of individuals and organizations in the improvement to flight safety.

5.1.1.2 Becoming a competent pilot

- Describe the general classification of the factors to be considered in assessing the competency of any individual pilot.
- Outline the factors in training that will ensure the future competency of the individual pilot, e.g. the relationship between self-confidence and expertise.

5.1.2 Accident statistics

- State in general terms the percentage of aircraft accidents which are caused by human factors and commonly described as 'pilot error.'
- Name the major single cause for a pilot induced accident.
- Summarize the accident trend in modern aviation.
- Identify the role of accident statistics in developing a strategy for future improvements to flight safety.
- Name the most significant item of technical equipment introduced in the 1980s and 1990s which has contributed to the reduction of accidents.

5.1.3 Flight safety concepts

- Analyze the flight accident statistics and point out the proportion of human error. Discuss its implication for flight safety concepts.
- Indicate the importance of error detection and list various methods of detection.
- Explain the importance for flight safety of understanding the causes and categories of accidents and incidents.
- Describe and compare the elements of the SHELL model.
- Summarize the relevance of the SHELL model to work in the cockpit.
- Analyze the interaction between the various components of the SHELL model.

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

5.2 BASIC AVIATION PHYSIOLOGY AND HEALTH MAINTENANCE

5.2.1 Basics of flight physiology

- List those factors which may affect the normal working of the human body when in flight.

5.2.1.1 The atmosphere

- State the units used in measuring total and partial pressures of the gases in the atmosphere.
- State in terms of % and mm Hg the values of Oxygen, Nitrogen and other gases present in the atmosphere.
- State the physiological significance of the following Laws and be able to carry out calculations using those laws:
 - Boyle's Law
 - Dalton's Law
 - Henry's Laws
 - The General Gas Law
- State at what altitudes in the standard atmosphere the atmospheric pressure will be 1/4, 1/3 and 1/2 of MSL pressure.
- State the effects of increasing altitude on the overall pressure and partial pressures of the various gases in the atmosphere.

5.2.1.2 Respiratory and circulatory systems

- List the main components of the respiratory system and their function.
- State the values for the normal rate of breathing and the volume of air exchanged with each normal breath ('tidal volume').
- State how oxygen and carbon dioxide are transported throughout the body.
- Explain the process by which oxygen is transferred to the tissues and carbon dioxide is eliminated from the body.
- Name the major components of the circulatory system and describe their function.

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

- Define 'systolic' and 'diastolic' blood pressure and give standard values for an adult at rest.
- Explain the function of the hemoglobin and state the percentage of oxygen saturated in the blood at MSL and at 10,000 ft.
- Define the following terms associated with failures in the respiratory/circulatory systems and analyze their significance for the conduct of a safe flight:
 - Hypoxia
 - Define 'hypoxia' and state why living tissues require oxygen.
 - State that healthy people are able to compensate for altitudes up to 10 - 12,000 ft.
 - List the signs and symptoms of hypoxia, define their characteristics and determine their role in flight safety.
 - Define the terms 'Time of Useful Consciousness' (TUC) and 'Effective Performance Time' (EPT).
 - State the TUC for 20,000 ft, 30,000 ft, 35,000 ft and 43,000 ft for a person at rest and for 25,000 ft when the person is moderately active.
 - Explain why it is unsafe to fly above 10 - 12,000 ft without using additional oxygen or being in a pressurized cabin.
 - List the factors determining the severity of hypoxia.
 - State the precautions to be taken when giving blood.
 - Hyperventilation
 - Define the term 'hyperventilation.'
 - List the signs and symptoms of hyperventilation and define their characteristics.
 - List measures which may be taken to counteract hyperventilation.
 - Decompression Sickness
 - State the normal range of cabin pressure altitude in pressurized commercial aircraft and describe their protective function for aircrew and passengers
 - Define the hazards of diving and flying and give the regulations associated with these activities.
 - Acceleration

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

- Define 'linear', 'angular' and 'radial acceleration.'
- Describe the effects of acceleration on the circulation and blood volume distribution.
- Describe measures which may be taken to increase tolerance to positive acceleration.

-Anemic hypoxia

- Define 'anemia.'
- State how carbon monoxide may be produced.
- State how the presence of carbon monoxide in the blood affects the distribution of oxygen.
- List the signs and symptoms of carbon monoxide poisoning.
- Indicate how carbon monoxide intoxication can be treated.

5.2.2 Man and environment: the sensory system

- List the different senses.
- State the multi-sensory nature of human perception.

5.2.2.1 Vision

- Name the most important parts of the eye and the pathway to the visual cortex.
- State the basic functions of the parts of the eye.
- Distinguish between the functions of the rod and cone cells.
- Explain the terms 'visual acuity', 'visual field', 'central vision', 'peripheral vision', 'fovea' and explain their function in the process of perception.
- State the limitations of night vision.
- Explain the basic principles of color vision and their relevance to flight duties.
- Explain the nature of color blindness.

5.2.2.2 Hearing

- Name the most important parts of the ear and the associated neural pathway.
- State the basic functions of the different parts of the auditory system.
- Differentiate between the functions of the vestibular apparatus and the cochlea in the inner ear.
- Summarize the effects of environmental noise on hearing.
- Identify the potential occupational risks which may cause hearing loss.
- State the role of the Eustachian tube in equalizing pressure

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

between the middle ear and the environment Indicate the effects of colds or flu on the ability to equalize pressure in the above.

5.2.2.3 Integration of sensory inputs

- Define the term 'illusion.'
- Give examples of visual illusions based on shape constancy, size constancy, aerial perspective, atmospheric perspective, the absence of focal or ambient cues, autokinesis, vectional false horizons and surface planes;
- Relate these illusions to problems that may be experienced in flight and identify the danger attached to them.
- Give examples of approach and landing illusions, state the danger involved and give recommendations to avoid or counteract these problems.
- State the problems associated with flickering lights (strobe-lights, anti-collision lights, etc).
- List the type of external stimuli that the components of the inner ear are able to perceive.
- Define 'vertigo', list the corresponding symptoms and identify the flight maneuvers provoking it.
- Differentiate between vertigo, coriolis effect and spatial disorientation.
- Explain how spatial disorientation can result from a mismatch in sensory input and information processing.
- List the measures to prevent and/or overcome spatial disorientation and/or vertigo in flight.

5.2.3 Health and hygiene

5.2.3.1 Personal hygiene

- Summarise the role of personal hygiene as a factor in human performance.

5.2.3.2 Common minor ailments

- List the negative effects of suffering from colds or flu on flight operations especially with regard to the middle ear, the sinuses, and the teeth.
- Explain the effects of pressure changes to structures in the ear and the implications of these effects.
- State the role of the Eustachian tube in equalizing pressure

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

between the middle ear and the environment.

- Indicate the effects of colds or flu on the ability to equalize pressure between the middle ear and the environment.
- Describe the measures to prevent and/or clear problems due to pressure changes during flight.
- Define 'Barotrauma.'

LEARNING OBJECTIVES

- Indicate the major sources of gastro-intestinal upsets , state the effects that may result during flight and list the precautions that should be observed to reduce the occurrence of these problems.

5.2.3.3 Problem areas for pilots

- Hearing loss
 - List the main cause of hearing loss.
 - List the main sources of hearing loss in the flying environment.
 - List the precautions that may be taken to reduce the probability of onset of hearing loss.
- Defective vision
 - State the corrective action necessary to compensate for defective vision.
 - List the type of sunglasses which could cause perceptual problems in flight.
- Techniques in visual perception
 - Define the term 'scanning technique.'
 - Explain, why it is important to visually scan the area by using regularly spaced eye movements each covering an overlapping sector of about 10 degrees.
 - State the rule, at present in force, for the wearing of corrective spectacles or contact lenses when operating as a pilot.
 - Explain the difference between the scanning technique used during the day and the appropriate technique to be used when flying at night.
 - State the effect that the duration of a saccade has on determining scanning patterns both inside and outside the cockpit.

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

5.2.3.4 Intoxication

-Tobacco

- State the harmful effects of using tobacco on:
 - The respiratory system
 - The cardio-vascular system
 - The ability to resist hypoxia
 - The ability to tolerate g forces
 - Night vision

-Caffeine

- Indicate the level of caffeine dosage at which performance is degraded.
- Besides coffee, indicate other beverages containing caffeine.

-Alcohol

- Give a general rule governing flying and drinking alcohol.
- State the effects of consuming alcohol on:
 - Ability to reason
 - Inhibitions and self control
 - Vision
 - Sense of balance and sensory illusions
 - Sleep patterns
 - Hypoxia
- State the effects alcohol may have if consumed together with other drugs.
- Identify the WHO definition of 'alcoholism.'
- List the signs and symptoms of alcoholism.
- List the factors which may be associated with the development of alcoholism.
- Define the 'unit' of alcohol and state the most effective factor determining the rate of metabolisation.
- State the maximum daily and weekly intake of units of alcohol which may be consumed without causing damage to organs and systems in the body.
- State the actions to be taken if a crew member is suspected of being an alcoholic.

-Drugs and self medication

- State the dangers associated with the use of non prescription drugs.

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

-State the side effects of common non prescription drugs used to treat colds, flu, hay fever and other allergies especially medicines containing anti-histamine preparations.

-Interpret the general rule that 'if a pilot is so unwell that he/she requires any medication then he/she should consider him/herself unfit to fly.

-Toxic materials

-List those materials present in an aircraft which may, when uncontained, cause severe health problems.

-State the dangers of mercury spillage in an aircraft.

-List the possible sources of mercury in an aircraft.

-List those aircraft component parts which if burnt may give off toxic fumes.

5.3 BASIC AVIATION PSYCHOLOGY

5.3.1 Human information processing

5.3.1.1 Attention and vigilance

-Differentiate between 'attention' and 'vigilance.'

-Define 'hypovigilance.'

-Identify the factors which may affect the state of vigilance.

-List the factors that may forestall hypovigilance during flight.

-Indicate signs of reduced vigilance.

-Name factors that affect a person's level of attention.

-Distinguish between selective and divided attention.

-Discuss the effects of performing simultaneous tasks in respect to the level of consciousness involved and demonstrated level of performance.

-Discuss consequences for work in a multi-task environment, bearing attention and vigilance in mind. Name procedures which increase safety.

5.3.1.2 Perception

-Name the basis of the perception process.

-Describe the mechanism of perception ('bottom-up'/'top-down' process)

-Illustrate why perception is subjective and state the relevant

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

factors which influence interpretation of perceived information.

- Describe some basic perceptual illusions.
- Illustrate some basic perceptual concepts and laws.
- Give examples where perception plays a decisive role in flight safety.

5.3.1.3 Memory

- List the three types of memory.
- Explain the link between the three types of memory.
- Describe the differences between the three types of memory in terms of capacity and retention time.
- Justify the importance of sensory store memories in processing information.
- State the average maximum number of separate items that may be held in working memory.
- Give examples of items that are important for pilots to hold in working memory during flight.
- Describe how the capacity of the working memory store may be increased.
- State the sub-divisions of long term memory and give examples of their content.
- Define the three different categories of information stored in long term memory.
- Name the common problem with long term memory and how to counteract it.

5.3.1.4 Response selection

- Define 'learning.'
- Explain and distinguish between the following basic forms of learning:
 - Classical and operant conditioning (behaviorist approach)
 - Learning by insight (cognitive approach)
 - Learning by imitating (modeling.)
- Find pilot related examples for each of these learning forms.
- State factors which are necessary for and promote the quality of learning.
- Explain ways to facilitate the memorization of information by the following learning techniques:

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

- Mnemonics
- Mental training
- Explain the relationship between motivation and learning, performance, and attention
- Describe the advantage of planning and anticipation of future actions.
- Define the term 'skills.'
- State the phases of learning a skill (ANDERSON.)
- Explain the term 'motor-programme' or 'mental schema.'
- Explain the following phases in connection with the acquisition of automated behavior:
 - Cognitive phase
 - Associative phase
 - Automatic phase.
- Describe the advantages and disadvantages of mental schemata.
- Explain the model by RASMUSSEN which describes the guidance of a pilot's actions in different situations.
- State possible problems or risks associated with skill-based, rule-based, and knowledge-based behavior.

5.3.2 Human error and reliability

5.3.2.1 Reliability of human behavior

- Summarize the current approach to human error in aviation. Identify the consequences in respect of the current approach.
- Name and explain factors which influence human reliability.

5.3.2.2 Hypotheses on reality

- Cite examples of the relationship between perception and reality in given circumstances.
- List factors which influence one's sense of reality.
- Define the term 'mental model' in relation to a surrounding complex situation.
- Describe the advantage/disadvantage of mental models.
- Explain the relationship between personal 'mental models' and the creation of cognitive illusions.

5.3.2.3 Theory and model of human error

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

- Define the term 'error.'
- Explain the concept of the error chain.
- Differentiate between an isolated error and an error chain.
- State examples of an isolated error and an error chain.
- Distinguish between different forms/types of errors (e.g. RASMUSSEN, REASON).
- Compare unintended and intended deviations from standards, leading to negative consequences.
- Distinguish between an active and a latent error and give examples.

5.3.2.4 Error generation

- Distinguish between internal and external factors in error generation
- Identify possible sources of internal error generation.
- Define the term 'environmental capture.'
- Define the term 'deterioration effect.'
- List the three main sources for external error generation.
- Give examples to illustrate the following factors in external error generation in the cockpit:
 - Ergonomics
 - Economics
 - Social environment.
- Name major goals in the design of human centered man-machine interfaces.
- Define the term 'error tolerance.'
- List (and describe) strategies which are used to reduce human error.

5.3.2.5 Decision making

- Define the term 'deciding' and 'decision making.'

5.3.2.6 Decision making concepts

- Describe the major factors on which a decision-making should be based during the course of a flight ('Judgment Concept.')
- Describe the main positive capabilities in an individual's decision making mechanism.
- Describe the main error sources and limits in an individual's

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

- decision making mechanism.
- State the factors upon which an individual's risk assessment is based.
 - Explain the relationship between risk assessment, commitment, and pressure of time on decision making strategies.
 - Describe the positive and negative influences exerted by other group members on an individual's decision making process.
 - Explain the general idea behind the creation of particular models' guidelines for decision making processes.
 - Illustrate a practical approach for decision making between crew members.

5.3.3 Avoiding and managing errors: cockpit management

5.3.3.1 Safety awareness

- Justify the need for being aware of one's own performance before and during a flight and possible consequences of its result as part of a pilot's professionalism.
- Define the term 'situation(al) awareness.'
- Name the three cognitive elements which are necessary to create an adequate situation awareness.
- Identify factors which interfere with being 'situationally aware.'
- List cues which indicate the loss of situation awareness.
- Name the main steps towards regaining lost situation awareness.
- Justify the value of situation awareness in the context of flight safety

5.3.4 Personality

5.3.4.1 Personality and attitudes

- Describe the factors which determine an individual's behavior.
- Define and distinguish between personality, attitude, and behavior.
- State the origin of personality and attitudes.
- Summarize the influence of pilot relevant personality traits and dangerous attitudes on pilots' performance in the cockpit environment.

5.3.4.2 Individual differences in personality

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

- Describe the individual differences in personality by the mean of a common trait model (e.g., EYSENCK's personality factors) and use it to describe today's ideal pilot.
- State the most important personality trait for effective crew decision making.
- Motivation
- Define motivation.
- Explain the influences of different level of motivation on performance in taking into consideration arousal and task difficulty.
- Explain the 'Model of human needs' (MASLOW.)
- Distinguish between the stages of the 'Model of human needs' by citing practical examples.
- Illustrate the influence of human needs on flight safety.
- Explain the basic model that identifies two independent sources of motivation; justify its conclusion on possible developments concerning an individual's job satisfaction.
- Summarize the advantages and disadvantages of extreme need for achievement.

5.3.5 Human overload and underload

5.3.5.1 Arousal

- Explain the term 'arousal.'
- Describe the relationship between arousal and performance.
- Understand the graphical representation of the above relationship.

5.3.5.2 Stress

- Explain the term 'homeostasis.'
- Explain the term 'stress'. Why is stress a natural human reaction.
- State that the physiological response to stress is generated by the 'fight or flight' response.
- Describe the function of the autonomic nervous system (ANS) in stress response.
- Explain the biological reaction to stress by means of the 'general adaptation syndrome' (GAS.)
- Explain the relationship between arousal and stress by referring to the effects of "good" and "bad" stress.
- State the relationship between stress and performance.

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

- Explain the differences between stress factors and stress reactions.
- State the basic categories of stress factors.
- Name major stress factors.
- List the major environmental sources of stress in the cockpit.
- State the acceptable amount of workload with regard to crew resources available, before it becomes an unacceptable stress factor.
- Name the principal causes of domestic stress.
- State that the stress experienced as a result of particular demands varies between individuals.
- Explain the process which is responsible for the individual differences in experiencing stress.
- Explain the difference between stress factors and risk factors.
- List factors influencing the tolerance of stressors.
- Create and explain a simple model of stress.
- Explain the relationship between stress and anxiety.
- Describe the effects of anxiety on human performance.
- State the general effect of acute stress on the human system.
- Name the symptoms of stress relating to the different phases of the GAS.
- Describe the relationship between stress, attention, and vigilance.
- State the general effect of chronic stress on the human system.
- Explain the differences between psychological, psychosomatic and somatic stress reactions.
- Name typical common physiological and psychological symptoms of human overload.
- Describe effects of stress on the personality.
- Explain how stress is cumulative and how stress from one situation can be transferred to a different situation.
- Explain how successful completion of a stressful task will reduce the amount of stress experienced when a similar situation arises in the future.
- List sources and symptoms of human underload.
- Describe the effect of human under/overload on effectiveness in the cockpit.

5.3.5.3 Fatigue

- Explain the term 'fatigue' and differentiate between the two types of fatigue.
- Name causes for both types.

סטטוס מסמך: בתוקף	שם המסמך: PPL Knowledge Test Standards	מספר המסמך: AP 1.3.004B
תאריך סקירה אחרון: 30/1/2020	תאריך כניסת גרסה לתוקף: 30/1/2020	מספר גרסה: #2

5.3.5.4 Body rhythms and sleep

- Name some internal body rhythms.
- Explain the term 'circadian rhythm.'
- State the approximate duration of a 'free-running' circadian rhythm.
- Explain the significance of 'Zeitgebers' in regulating the normal circadian rhythm.
- State the effect of the circadian rhythm of body temperature on an individual's performance standard and the effect on an individual's sleep patterns.
- List and describe the stages of a sleep cycle.
- Differentiate between REM and non-REM sleep.
- Explain the function of sleep and describe the effects of insufficient sleep on performance.
- Explain the simple calculations for the sleep/wake credit/debit situation.
- Explain how sleep debt can become cumulative.
- State the time formula for the adjustment of body rhythms to the new local time scale after crossing time zones.
- State the problems caused by circadian disrhythmia (jet-lag) on an individual's performance and sleep sequence.
- Differentiate between the effects of westbound and eastbound travel.
- Explain the interactive effects of circadian rhythm and vigilance on a pilot's performance during flight as the duty-day elapses.
- Describe the main effects of lack of sleep on an individual's performance.
- List possible coping strategies for jet-lag.

5.3.5.5 Fatigue and stress management

- List strategies which prevent or delay the onset of fatigue and hypovigilance.
- List and describe coping strategies for dealing with stress factors and stress reactions.
- Distinguish between short-term and long-term methods of stress management.
- Give examples of short term methods of stress management.
- Give examples of long-term methods of coping with stress.
